Client:

import socket

HOST = "127.0.0.1"

PORT = 8888

try:

```
client = socket.socket(socket.AF_INET, socket.SOCK_STREAM)

client.connect((HOST, PORT))

# Receive welcome message
print(client.recv(1024).decode().strip())
print(client.recv(1024).decode().strip())

# Get message
message = input("Type Message: ")

# Send message
client.sendall((message + "\n").encode())

# Receive response
response = client.recv(1024).decode().strip()

print(response)

client.close()
```

```
except Exception as e:  
    print("Error:", e)
```

OUTPUT:

The screenshot shows a Visual Studio Code editor with a dark theme. The Explorer sidebar on the left shows a project named 'CRYPT' with files '7.py', '8client.py', and 'server.py'. The main editor window displays the code for '8client.py'. The code imports the 'socket' module, sets 'HOST' to '127.0.0.1' and 'PORT' to '5000', and uses a try block to create a socket, connect to the host, receive a welcome message, and then prompt the user for a message. The bottom panel contains the 'TERMINAL' tab, which shows the output of running the script. It displays 'SIMPLE PYTHON HONEYPOT', 'Honeygot started on port 5000', and 'Waiting for connections...'. A connection is detected from IP 127.0.0.1 on port 52536, and the user enters the message 'hello'. The terminal also shows the connection closing. On the right, the 'CHAT' sidebar is visible with a 'SESSIONS' section and a prompt to 'Describe what to build'.

```
8client.py > ...  
1  import socket  
2  
3  HOST = "127.0.0.1"  
4  PORT = 5000  
5  
6  try:  
7  
8      client = socket.socket(socket.AF_INET, socket.SOCK_STREAM)  
9  
10     client.connect((HOST, PORT))  
11  
12     # Receive welcome message  
13     print(client.recv(1024).decode().strip())  
14     print(client.recv(1024).decode().strip())  
15  
16     # Get message  
17     message = input("Type Message: ")  
18
```

```

```
print("Server Message:", message)
```

```
client.close()
```

```
except Exception as e:
```

```
print("Error:", e)
```

Output:

The screenshot shows a VS Code editor with a file explorer on the left containing files: 7.py, 8client.py, client2.py, server.py, and server2.py. The main editor window displays the code for client2.py, which is a simple Python client script. The script sets a port to 9999, attempts to connect to a host (HOST) on that port, receives a message, prints it, and then closes the client. It also includes an exception handler to print any errors. The terminal window at the bottom shows the output of running the script. It displays a message 'SIMPLE PYTHON HONEYPOT' followed by 'Honeypot started on port 9999' and 'Waiting for connections...'. Then, it shows a connection detected from IP 127.0.0.1 on port 56066 at a specific time, and finally, the connection is closed. The status bar at the bottom indicates the file is at line 18, column 23, using UTF-8 encoding, and the Python interpreter is set to Python 3.13 (64-bit).

```
client2.py > ...
4  PORT = 9999
5
6  try:
7      client = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
8
9      client.connect((HOST, PORT))
10
11     message = client.recv(1024).decode()
12
13     print("Server Message:", message)
14
15     client.close()
16
17 except Exception as e:
18     print("Error:", e)
```
